Addons for Games.cz

Detailed installation instructions

Before we start

You need to **download the map including accessories for buses with a new patch**. This can be found on the official website, exactly on this site addonsforgames.cz. To get to the **Download section** it is necessary to log in.

Other parts that you will need to download is the bus **RENAULT CITYBUS** (author Kosak) from website of Map Usti nad Labem, exactly [here](#). Of course for this bus was released patch for smooth operation. To download [here](#). For the bus was also published EN manual. So I recommend beginners [to download](#) and read it.

Recommend also download other nice Czech bus, specifically **Karosa B732** (author Redgunn) [here](#). Available patch you can find [here](#). Manual for this bus is packaged within the archive.

For AI traffic is still good to download **SOLARIS ALPINO 8.6**. You can find [here](#) and patch [here](#).

However, it is necessary to own OMSI BUS SIMULATOR, which is the most important part of all.

***Note:** Downloading the above models of buses is not necessary for the operation of maps. If you prefer something else, you can download other. The choice of buses is entirely up to you. Of Course to keep reality recommend using the above mentioned buses.*

Installation - step by step

If you have downloaded everything what you need, so you can start the installation. Also, make sure that the version of OMSI is current, ie version 1.0.1. If not, then you can download the patch [here](#).

***Note:** The procedure described below is from a purely installed game, ie. OMSI Bus Simulator don't have any additional installed components (buses, maps, mods, etc.).*

1. Inside of downloaded file **AfG_Prague_Citybus_Line_235_v1.0.zip** find the folder **Mapa_235**, whose entire content copy to game directory (typically to **C:\Program Files\OMSI**, of course the destination can be different, depend on where you installed the game) and original files overwrite. Now the map of bus line 235 is ready for show in game editor.
2. Extract downloaded file **rencitybus.rar** anywhere, for example to temporary folder and run **rencitybus.exe**. Follow the instruction of installator, then choose the way to directory, where the game is installed and install the bus. Now we have installed the bus Renault Citybus, of course in version for other map (*Usti nad Labem od Kosaka*). Inside folder Vehicles in game directory automatically was created the folder **REN_CITYBUS**, where copy content from downloaded file **patch_citybus.rar** and original files overwrite.
3. This a new folder **REN_CITYBUS** copy anywhere to temporary folder. Then **REN_CITYBUS** rename to **REN_CITYBUS_DPP** and move back to folder Vehicles. In Vehicles directory now we have two

folders with two authentic buses. It is for the reason, than we will overwrite files of the bus. In this way you can use other version of Citybus anytime.

4. Next bus Karosa B732 doesn't have a setup file, so the content of **Karosa B732 1.0.rar** install manually to OMSI. Namely folders **Fonts** and **Vehicles copy to the game directory and original files overwrite** (*Inside the Readme folder can find manual for this bus, but only CZ version*). Then we will apply the patch subsequently. The content of **hotfix-b732.7z** copy to game directory and original files overwrite.
5. We need to install a bus Solaris Alpino 8.6 for AI traffic controlled by computer. The content of **Solaris-Alpino-8,6.zip** copy to folder **Vehicles** in game directory. This bus has patch too, so from the file **patch-1.zip** namely folder **Poprawka 1** copy all content to the bus folder **Solaris - Kopia**.
6. **Finally copy all content of downloaded file Line_235_update_v1.01.zip to game directory and overwrite all.** In this way we reach to map update, adds missing files and fixes some bugs. For simplification a whole installation of map the update contains files from previous version, of course ready to copy by these installation instructions.

If you keep the instruction, than buses Renault Citybus and Karosa B732 should be fully functional and the game will not show modul fault.

Note for advanced users: *If you want to use other buses, you have to use files from **AfG_Prague_Citybus_Line_235_v1.0.zip\Vozidla\Vehicles** and then overwrite updated files from **Line_235_update_v1.01.zip\Vehicles**.*

Warning: It is possible that detect new errors. Unfortunately OMSI is unpredictable. However, based on your tips and detection bugs we will continue to work on their repair and prepare the next updates.
